

ORANGE PEKOE BLEND

"FRESH FROM THE GARDENS"

United States Joins The I.L.O.

More than ordinary significance attaches to recent decision of the American Congress to apply for full membership of the International Labor Organization at Geneva, usually referred to as the I.L.O. Not only will accession of the United States add considerably to the prestige that organization now enjoys, but, bringing as it will the U.S. into direct confrontation with this important branch of League of Nations activity, the move will do much to restore prestige lost by the parent body through recent defections, notably that of Japan.

Press despatches have revealed little of the background, few of the motives, behind this change of front on the part of the Washington government. It is true, of course, membership of the International Labor Organization does not involve endorsement of the League covenant, nor does it entail any political commitments to the League as such. In fact, the U.S. desire to provide adequate safeguards against the "foreign entanglements" that country has so rigorously eschewed since the war, is exemplified in the act of Congress which specifically declares that the United States, by membership in the I.L.O., shall assume "no obligations under the covenant."

This, of course, is possible. The International Labor Organization, like the World Court upon which the United States long has been represented, is an autonomous section of the League of Nations. Membership in either or both is possible without acceptance of the covenant. Germany, as a matter of fact, was an active, full-fledged member of the I.L.O. for six years before becoming a member of the League of Nations. The connection between the organization and the League is derived not from the covenant but from the charter of the I.L.O., which is Part XIII. of the Treaty of Versailles.

The International Labor Organization is, however, much closer to the League than is the World Court for the reason that it is, essentially, a means of getting international legislation enacted, or treaties negotiated, as is the League itself. The heart of the League system is its permanent mechanism for continuous international negotiation, and the I.L.O. parallels this machinery throughout, in its limited field of social questions.

The importance of the United States' decision to join the International Labor Organization, therefore, can best be deduced by considering it in relation to the economic problems created by varying standards of living, hours of labor and rates of wages, in nations now competing for foreign markets, and also by contrasting the present action with Washington's past attitude towards the Geneva labor office.

Hitherto, the United States has been far colder to the I.L.O. than to any other branch of League activity. Until one year ago, the United States government would have nothing whatever to do with the labor organization, but now, without any parade or ballyhoo, Congress has accepted, virtually without demur, the proposal to apply for membership. This will involve representation on the permanent secretariat at Geneva and ultimate appointment of American representatives to the personnel of the central office.

Psychologically, the action of Washington will have more far-reaching effects. It will give Japan, Germany and Italy "currency to think" for, if President Roosevelt can persuade Congress to make so complete a volte face in so short a time in connection with one great section of League activity, it follows that but little additional pressure would be required to convert his legislators to the idea of accepting the League covenant. Despite recent reticences, and the insistence upon non-political safeguards, American opinion relative to the League is undergoing a change—and that change is not so far short of accepting League membership as to make that end remote. If it comes to pass that the United States enter the League, that body will immediately assume grander and nobler proportions in the eyes of the world, and the dreams of those who called it into existence will be within sight of fulfillment.

China Holds Cricket Fights

Sportsmen Will Pay Ten Dollars For Good Fighter

A great effort is being made in China to stamp out cricket-fighting. It is being made as great a legal offence as opium smoking, and punishable with equally severe sentences. Despite the efforts made to stop the "sport," an enormous amount of it goes on. Chinese will pay as much as \$10 for a good fighting cricket, and many make it a business to breed them and train them for fighting. In the same way as cocks used to be trained for the old English sport of cock-fighting. The crickets face each other in elaborate bamboo "rings," down the middle of which a glass slide runs, through which the fighters glare at each other until such time as their ire is sufficiently aroused for the attack. Large stakes change hands during the fights.

Gave Lindbergh First Ride

H. B. (Rues) Overly, the man who gave Col. Charles A. Lindbergh his first airplane ride, is dead. In his book "We," Lindbergh wrote how he was first inspired by while watching Overly's plane soaring over Madison.

Milk has the highest food value of all foods and is considered the most nearly perfect food.

Change of Climate, Diet, Water Often the Cause of Diarrhoea

If you are suddenly attacked with Diarrhoea, Dysentery, Colic, Cramps, Pains in the Stomach, Summer Complaint or any Looseness of the Bowels, do not waste valuable time, but get a bottle of Dr. Fowler's Extract of Wild Strawberry and see how quickly it will relieve you.

This bowel complaint remedy has been on the market for the past 38 years. Proof enough that you are not experimenting with some new and untried medicine.

Do not accept a substitute. Get "Dr. Fowler's" when you buy. Let it, and be on the safe side.

Put up only by The T. Millers Co., Ltd., Toronto, Ont.

Project May Succeed

New Process Being Tried To Dredge Gold From Fraser River

The golden wealth in the sands of the Fraser river, which has till now proved largely elusive to the efforts of man, and of which there is said to be enough to pay the national debt of Canada many times over, is to be attacked this summer with a new type of dredge, and with what appears to be every prospect of success.

The structure, now nearing completion, is the largest work of its kind ever attempted on the Pacific coast, incorporating for the first time anywhere in the world an entirely new process as applied to gold dredging.

Built under the engineering advice and supervision of Hume Robertson, placer mining engineer, who has had 20 years' experience in that kind of work with British companies in the Malay Peninsula, the great hull may now be seen assuming final shape at the shipyards of B.C. Marine Engineers and Shipbuilders Limited.

Hydraulic pumps, with suction strength of 200 pounds to the square inch, created by two 500-h.p. motors will raise the sands from the bottom of the river and the complete process of washing and refining will be completed upon the dredge.

Capacity, with the present equipment, is placed at 12,500 cubic yards a day, but provision has been made for double the present stowing area by the addition of an upper deck, on an incline of 13 feet from bow to stern.

The whole operation will be electrically driven with individual motors and control switches on the bridge towards the bow of the structure. Present estimates indicate an operating cost of not more than two cents a cubic yard.

Hydro-electric plant is to be constructed on Jones Creek, near where the dredge will be put into operation, and will generate 2,000 horse-power. It is understood that work upon this phase of the undertaking is to start at once.

If the operation of the first dredge proves successful—and every possible safeguard against failure seems to have been taken—the company will proceed to the construction of other dredges of similar model.

Smaller units will be needed in some parts of the river under lease, but all will incorporate the present equipment, with such improvements as practice may suggest.

Problem In South Africa

Many Pupils With Scottish Names Speak No English

As in Quebec so in South Africa there are people with pure Scottish names like Campbell, Fraser and MacDonald, who speak little or no English. Dr. H. B. Blomfield, Director of Education of the Orange Free State in the Union of South Africa, remarked after an investigation of Quebec school conditions.

Dr. Pellissier went to Quebec to study the question of bilingualism and how it is handled in that South Africa they have the same problem, the majority of the pupils speaking Dutch and the minority English. They also are faced with the difficulty of educating children in the outlying sections as in Quebec. Dr. Pellissier said the children with the Scottish names are the descendants of settlers who married Boer women. They gave their names to their wives but the mothers passed their own language to their offspring.

Soured On The World?—THAT'S LIVER

Wake up your Liver Bile

No Calomel necessary

Many people who feel sour, sluggish and generally wrecked make the mistake of taking Calomel, which is a powerful purgative, but it does not clean the liver. It merely drives the bile down the bowels and leaves the liver clogged. The liver is the source of all the bile that is used in the body. If the liver is clogged, the bile cannot flow, and the body is poisoned. The liver is the source of all the bile that is used in the body. If the liver is clogged, the bile cannot flow, and the body is poisoned.

Year Of Anniversaries

At Least Three Will Be Commemorated During 1934

That 1934 is a year of anniversaries was recalled by Victor Morris, chairman of the Montreal committee on the Jacques Cartier observances, to the Quebec Women's Institutes convention.

In 1534 occurred the discovery of Canada by Jacques Cartier; in 1634, the extension of the colony by the founding of Three Rivers; in 1734, the opening of the first road between Quebec and Montreal; and in 1834, the granting of its charter to Toronto.

CAN'T SLIP OR SLIDE FALSE TEETH

Don't use any old kind of remedy to replace missing teeth. Use the new, reliable, scientific method of Dr. Werners' False Teeth. They are made of the finest materials, and are so secure yet comfortable they feel natural. Positively no slipping or clicking—no pain or discomfort all day long. Forms a special comfort cushion to protect and soothe gums. No colored, gum-like paste—purely natural—breathable. Inexpensive—all druggists.

Some Long Sleeps

But Record Of Rip Van Winkle Still Stands

A Huddersfield man has had no sleep for eight weary years. Not even morphine can give him an hour of real sleep. How he must envy such a man as W. Foxley, pot-maker to the Mint, who fell asleep on April 17, 1946, and slept serenely for fourteen days and fifteen nights. Fourteen days is only a nap compared with the exploits of some sleepers. A German civil servant named Arnheim, forty-five years old, slipped one evening as he got out of a tram and knocked his head on the pavement. He was taken home and put to bed. The doctors said there was no concussion or serious injury. Next morning he was still asleep, and he slept for two years and four months. He was a wreck when at last he woke, yet in the end he recovered. There was the famous Marguerite Boveaux, "the Sleeping Woman of Thonelles," who was thrown into a trance-like sleep by a fright and sleep for three years and six months. Then she slowly roused, was able to talk, but she was wasted to a skeleton, and died five months later.

The record Rip Van Winkle is an American, a farmer called Harns. He came in one evening, tired after a long day's work, went to bed and slept for twenty-six years. It was possible to rouse him to take food, but he could not stay awake more than five minutes. Like the French woman sleeper, he wasted away and died.

French Company Will Survey Bear Lake

If Report Is Satisfactory Capital Will Be Invested

A vast amount of French capital will be invested in development of the Great Bear Lake mining district, providing that a survey to be made this summer by Dr. Edmund Bruet, who arrived at Edmonton from Paris, proves satisfactory.

Dr. Bruet, answering questions which were interpreted by Paul Jervin, former French consul at Edmonton, stated that there was no question of large scale development being undertaken if his report recommends such action.

Dr. Bruet is vice-president and director of Comalun, a large French company which is interested in mineral resources all over the world. It has organized a Canadian branch which would carry on the work in the north country.

The company is interested in gold, silver, platinum, and any of the other mineral discoveries in the far north. Also representing the department of natural resources at Paris, Dr. Bruet also will study the habits and customs of the Indian tribes in the north. He also expects to take back to Paris specimens of plant life and also insects found in the north country.

Queen's Voice Over Radio

For the second time in the history of broadcasting the queen's voice will probably be heard on the wireless in September, the occasion being the launching of the Cunarder, No. 534, at Clydebank. Her Majesty having been heard on the wireless in the early days of the British Broadcasting Corporation.

Find Gold In Meteorite

Science's first recorded discovery of gold that has fallen from the sky to the earth was reported at Berkeley, California, by Dr. C. L. Anderson, before the meeting of the American Association for the Advancement of Science. Minute amounts of gold were detected in a meteorite found near Melrose, N.M.

Is Crack Shot

Sergeant Forslund Of R.C.M.P. Excels With Rifle And Revolver

The crack shot of the Royal Canadian Mounted Police, according to the annual report of that force tabled in the House of Commons, is Acting Sergeant D. E. Forslund, who serves in "K" (Alberta) division. Not only does Sergeant Forslund excel with the rifle, but he is also a sure marksman with the revolver. He is the present holder of the Connaught cup. While attending an instructional class at Regina, he fired a course and secured a possible 240 points.

Machine Reads Minds

Graph Paper Takes Record Of Reactions On Brain

The old story about the walls of Jerry-built houses being so thin that you could hear your neighbor changing his mind seems likely to come very near the truth. A machine invented by Dr. Alexander Cannon records any mental reaction, and consists of flexible tubes which are attached to a human subject. The reactions of the brain are recorded on graph paper. Simple emotions like surprise, love, hate, are recorded, and the machine also registers mental fatigue, the capacity of the mind, reaction to tension or concentration, self-doubt, tendencies, and whether the subject is telling the truth or lying. Among other things, it shows that valvula music is soothing, and that it relieves asthma by inducing regular breathing. It is also claimed that it proves telepathy to be a physical fact.

May Join League

By Doing So Russia Would Gain Confidence Across Europe

Russia, it is said, plans to enter the League of Nations, and is only delaying to decide what manner of entry would leave it the least explaining to do as to why it stayed out so long.

A chivalrous desire to help keep peace in Europe is credited to Moscow, no doubt correctly. But there is shrewdness, as well as chivalry in the move. Stalin has troubles enough, without having to keep a watchful eye always on the western front.

In particular he has occasion to focus attention on the far end of his dominion, in which quarter Japan is carving out a place for itself in the Oriental sunshine without much regard for the Russian empire.

Joining the League would be for Russia the next thing to making a general treaty of inoffensiveness with Europe, and leave the Soviet dictator free to pay attention to urgent matters in the Far East.

Japan undoubtedly sacrificed a measure of world confidence when it quit the League. Russia would correspondingly gain confidence abroad if it joined the League and thus associated itself with the proclaimed purposes of that organization.—Edmonton Bulletin.

Turns Page In History

British Girl Retains Nationality Although Married To Frenchman

An English girl of 21 has turned a new page in the story of English women's fight for equal rights with men.

For pretty Ina Ginn, of Stanmore, Middlesex, has become Mme.—or rather Mrs. Lucien Albert of Paris—and retained her British nationality. She is the only Englishwoman to have married a Frenchman—or any foreigner—and remained British.

Shyly she told how she wrote to the Home Secretary on her engagement, explaining her patriotic desire; of the long negotiations with French and British authorities.

She went to Paris to be married—on Boxing Day. Since then, presumably, she has had no nationality until now.

She displayed the new British passport, in her married name, which she has just received. Written in by hand was read: "British subject under the provisions of the British Nationality and Status of Aliens Act, 1933, wife of a French citizen."

British Aviatix On Visit

Any Mollison Made Short Stay In New York

Feeling "very fit" Amy Mollison, British aviatix, arrived on the liner Majestic for a short visit in New York.

Since the crash in Connecticut of the plane in which she and her husband, James Mollison, made a westward crossing of the Atlantic in 1933, she has had little flying, she said; "just a little for my own pleasure."

She said that she and Mollison were looking forward with enthusiasm to the England-Australia air races next October in which they will participate.

Just Moving Again

When Mark Twain was a young and struggling newspaper writer in San Francisco, a lady of his acquaintance saw him one day with a cigar box under his arm looking in a shop window.

"Mr. Clemens," she said, "I always see you with a cigar box under your arm. I am afraid you are smoking too much."

"It isn't that," said Mark. "I am moving again."

HEAT IRRITATION

Relieved!

In hot weather, stomach disorders and indigestion occur more frequently. Also children may play too hard. Mrs. Mary Mason, 33 Atlantic St., Halifax, N.S., says: "When the children are overtired by playing, I have found that giving them Baby's Own Tablets before retiring and in the morning keeps them happy, contented children. Safe even for the tiniest baby, these little white tablets effectively relieve colic, summer complaint, simple fever and all minor disorders. Price 25c package, 10c 6c William."

BABY'S OWN TABLETS

Indian Rope Trick A Myth

Occult Committee Says No One Has Ever Seen It

As the result of a solemn inquiry held by the occult committee of the Magic Circle—a group of bona fide scientists—the Indian rope trick to-day reposes under a headline officially chiseled "myth."

Nobody, evidence before the committee showed, has ever performed the rope trick—wherein an Indian fakir is supposed to toss a limp rope vertically into the air, whereafter a boy nimbly climbs out of view into the heavens. Nobody could be found who had seen the trick done. So, in effect, the occultists found that neither the rope nor the story will "stand up." The group has offered \$2,500 to anyone who will perform the feat.

Lord Amphiloph, once viceroy of India, presided over the committee's meeting.

How India was secured and large rewards were offered futilely for a rope trickster when King George and Queen Mary toured India early in the reign of the latter.

Even the great Nizam of Hyderabad, with limitless resources, was unable to locate a juggler who could do the rope trick, when asked to provide one for a giant garden party, related his friend, Sir Michael O'Dwyer. In 25 years in India, Sir Michael never found anyone who had seen the trick.

Harry Price, director of the "National Laboratory of Spiritualism," said he had collected a library of 12,000 books about magic, and not one contained any genuine evidence about the trick.

Sir Francis Griffin, formerly an inspector-general of police in India, imputed belief in the rope trick to the power of suggestion, like the impressionable American lady of travel who said the most remarkable thing he had seen in all India was the sun setting behind the Aga Khan.

Breakdown Seems Complete

Failure Of Disarmament Conference
Tragic Thing For World
 The breakdown of the Disarmament Conference is complete, however diplomacy may camouflage it, and 20 years after the Great War the world is about to return more lethally than ever.

For this tragic situation some earnest pacifists blame France. Had the first German Socialist regime been more sympathetically treated, they argue, Hitler would never have been heard of. But the French, who lived next to them, contend that Germans have never lost the Nazi spirit, which is merely pre-war Prussianism under a new label and with slightly changed outlook, and that it was continental pacifism, in the United States and this country, that actually encouraged the Hitler coup d'état.

With world-wide support, which North America must be a vital part of the League of Nations might have coerced the post-war old Adam into realistic pacifism. But the golden chance has been missed.

It is hard to see what can now be saved from the wreck. With the disarmament fiasco goes the League of Nations, as an institution of any practical realism, not to mention all the solemn peace pacts, signed with golden pens since 1918, which are now scraps of paper.

Germany and Japan, the two most militarist states, are no longer members of the League, and, if Russia allows herself to be recruited, it will be simply because Moscow sees some tactical advantage in that move as against both Germany and Japan, her awkward neighbors.

It remains a fact that self-preservation is still the first law of Nature, in nations as in individuals, and, thinking in blinkers, each nation takes a short view of what constitutes its safety. The Federation of Mankind has yet to be achieved. It may need another Great War, and wiser statesmanship to do it.—London correspondent Ottawa Journal.

The Game Of Golf

People In England Play More Particularly For Sport

On this continent golf is looked upon as a game for the "white-collar" class—but there is no reason why it should be. Unfortunately the upsurge of golf courses makes the game prohibitive for many (and burdensome, even for some who do play) and the country has not reached the stage where every municipality of size can afford a municipal course. But in Britain it is different. There golf is regarded as everybody's game, and people of all walks of life play it and become proficient too.

But in England there is a different golf spirit. Here players start out to become experts if they can, and the result is that many excellent players are produced. American golfers make a habit of going over to England and carrying back most of the cups but there is a reason for it. In England they play it for the game itself and the result is that there are a number of really fine golfers in that country—many more than there are on this continent even though they fail to perfect their game to the point where they are successful tournament players. So it is really no wonder that an unemployed carpenter made such a fine showing in the British Amateur. He has probably been playing golf all his life—and the fact that he is now unemployed, may have given him the chance he needed to concentrate on his play.

Canadian wheat in the United States on June 8 amounted to 6,613,977 bushels, of which 4,923,888 bushels were in the hands of Buffalo; 129,964 bushels at New York, and 1,540,000 bushels at Erie.

OGDEN'S "Cuts Well That Smokes Well"

The Ruler Of Turkey

Citizens Do Not Love Mustafa Kemal But Respect Him

Last fall, when Maxim Litvinov was asked to name the greatest European statesman, he replied, "The greatest European statesman to-day lives not in Europe but across the Straits: his name is Mustafa Kemal." If by greatness he meant power, Litvinov's choice can hardly be disputed. Outstanding even in this age of dictators, President Kemal has ruled the Turkish Republic since its foundation eleven years ago. Some of his decrees have been unpopular—especially those tending to Westernize the country, such as the abolition of fezzes, veils, polygamy, and the substitution of the Latin alphabet for the Arabic—but he has been able to enforce them because any opposition to him is merely nominal. The Sultan himself, for whose overthrow Kemal and his armed forces were largely responsible, could do little more.

Yet Kemal's ambitions are not so much personal as they are nationalistic. A greater Turkey, a modern Turkey is his aim; toward that he has introduced the efficiency methods of the West and has groomed a staff of traveling diplomats who are making alliances with nations that were formerly Turkey's enemies. For this the Turkish citizens respect him. It is doubtful that they love him, although his earlier exploits in war once made him a national hero.

"The Great and Victorious One" lives at Ankara, the town he has made Turkey's capital. Here his chief interests is the model experimental farm which he has created and which elicits the admiration of all visitors. Kemal is divorced, and has no children. His favorite drink, and it is said that on occasion he can drink a lot of it, is champagne.

Canada's Apt Pupils

The Silver Fox Industry Is Flourishing In Norway

Canada taught several European nations all there was to know about the silver fox industry and they proved apt pupils. In Norway during 1932 and 1933 he writes the Canadian Trade Commissioner, silver fox farming has been on a very much better basis than during previous years. The influx of imported animals for breeding stock, particularly from Canada, which was of importance during the first eight or ten years after the Great War, has during recent years almost entirely ceased. During 1933 the Norwegian auctions proved a success with buyers coming in fairly large numbers from several European countries. The attempt to place the Oslo auction of 1933 on a plane somewhat like that of the great fur auctions in London, Leipzig, and New York, while somewhat ambitious, indicates a considerable advance in the general organization of the industry and the distribution of its product.

Canadian Hardwood

An increase of 100 per cent. in sales of Canadian hardwood to Great Britain for the first three months of this year has been reported. The figures are placed at 1,246,000 cubic feet this year compared with 604,000 cubic feet during the same period in 1933. Canadian hardwood is being used in increasing quantities in Great Britain for flooring, furniture, and the manufacture of automobile bodies.

Cruise Around The World

Hundreds of British workers and their wives who have never been farther from home than Margate or Blackpool, are planning to take a cruise around the world next year at a cost of \$500 to each passenger.

On the first of May this year frozen poultry holdings in Canada were some 2½ million pounds in excess of the previous year, but by June report trade is largely responsible for reducing the stock.

A process by which wool is rendered itches and shrinkings has been invented.

Held Many Foreign Titles

Duke Of Wellington Received Honors After Peninsular Campaign

Arthur Charles Wellesley, fourth Duke of Wellington, was born in London on June 15, aged 85, was the grandson of Arthur Wellesley, the first Duke of Wellington, who routed Napoleon's forces and hopes at Waterloo. He was born March 15, 1849, the son of Major General Lord Charles Wellesley, second son of the first duke. Thanks to the honors Spain and Portugal showered upon his grandfather after the Peninsular campaign, he probably held more foreign titles than any other member of the British nobility.

He served for some time with the Grenadier Guards and was lieutenant-colonel in command of the 1st Battalion from 1891 to 1895, when he retired. Succeeding to the dukedom and the Spanish and Portuguese titles on the death of his brother in 1900, he inherited also 18,600 acres of land in England and a large estate in Spain as the Duke of Ciudad Rodrigo.

After the establishment of a republic in Spain in 1931, the new government set about plans for seizure of the estates of the nobility, much of which consisted of undeveloped lands and, in 1932, after the unsuccessful revolt of General Sanjurjo, all such estates were declared confiscated unless the owners could show that they were being cultivated in an approved manner.

The name of the Duke of Wellington appeared in October, 1932, on a list of those whose property was liable to confiscation and he offered immediately to sell his lands, which were in a high state of cultivation, to the Spanish government. The government refused the offer and informed him that the land was granted by Spain for services of extreme value rendered to the nation and there was no intention of reclaiming the gift.

The illness of the duke prevented observance of the traditional paying of the "annual rent," a ceremony presented since the first duke was presented with estates in Strathfield-Saye, Hampshire, by the British government in 1814. The rent takes the form of a small silver flag which the title holder gives the King. Recently the ceremony has taken place in Windsor Castle. The flag is hung on the bust of the first duke, which stands in the guard room.

The heir to the title is the duke's son, the Marquis Douro.

Fight Gas With Gas

France Has Devised Defences Against Enemy Assaults

France is prepared to fight gas with gas and has devised defences against enemy assaults on whole cities by disease germs, military officials revealed.

A newly-developed defensive gas effectively neutralized poison gases which might be dropped on centres of population in air raids, it was said. Another gas, it was explained, would kill microbes released over a city.

Prepared to invoke these new defences, military authorities said they were "not alarmed" by disclosures in London that Germany allegedly has studied the feasibility of flooding London and Paris subway systems with gas and germs.

Marvels Of The Heavens

Astronomer Gives Some Idea Of Age Of Sky

Sir James Jeans, the astronomer, unfolded some marvels of the heavens in a lecture at the Royal Institution recently. Here are some of them: Altogether there are 100 million stars. They are scattered round in the shape of a gigantic cartwheel. This wheel of worlds goes round with majestic slowness. Each revolution takes 250,000,000 years. During the whole of the civilized epoch the wheel of worlds has only moved as much as the hour hand of a clock moves in one second. Yet—and this will give you some idea of how old the skies are—the wheel of worlds shows evidence of having gone round thousands of times.

The New Diana

Fast Mail 'Plane Of Imperial Airways Well Named

Endurance feats like those of Mrs. Mollison and Miss Jean Batten will soon cease to have any good excuse. When Miss Amy Johnson flew to Australia in twenty days the regular air line ended at Karachi, and she was continuing along a route where no woman had flown before. Miss Batten, taking the same trail in the same type of aeroplane, also had some reason for enduring the strain of long days alone in the air. She had not seen her father in New Zealand for a long time and she wanted to get there quickly. She reached Darwin in fifteen days. A few months hence the mails will need only fourteen days for the journey from London to the great cities in the south of Australia. Instead of travelling, as these two women plotted it, at a speed of eighty miles an hour, the mails will be taken in the new Diana air line at a speed of 145 miles an hour.

Four years ago Mrs. Mollison herself might have been dubbed the new Diana, making her conquests with the aid of horse power in the place of dogs, but leading the chase in otherwise solitary sport for the dedication of the multitude. Her position as the maker of the fastest time for women pilots between England and Australia had stood unchallenged for four years. Now Miss Batten has displaced her by the simple expedient of spending less time on the ground. There was no need to prove that engine and aeroplane would stand such treatment. Mr. C. W. A. Scott and others had driven similar aeroplanes much harder along the same route. Nor was it impossible to obtain faster aircraft for such a journey. The flight clearly was a test mainly of stamina in the pilot, made at the best time of the year for flying and along a route which is nearly ready for the operation of regular mail services.

In that sense such a flight will never lack excuse, but when the new Diana of Imperial Airways has taken up her duties, and is coursing along the route once a week in either direction, solitary flights by accomplished young women will fall into the category of channel swimming and motor car reliability trials. Some time in the future the air cruise to Australia may be undertaken in the spirit of holiday rather than of achievement; and when the chase has thus become a procession even the new Diana herself will have been displaced by something still more mechanically efficient.—London Times.

MATURITY—MATERNITY MIDDLE AGE

At these three critical periods a woman needs a medicine she can depend on. That's why so many take Lydia E. Pinkham's Vegetable Compound. 98 out of 100 say, "It helps me!" Let it help you, too.

Manchurian Army

Japanese Officials Find They Have More Soldiers Than They Need

The problem of what to do about the Manchurian army, now in the uniforms of the state of Manchoukuo, is disturbing the Japanese advisers and administrators of the new government.

In the days of Chinese domination an army of more than 300,000 men was maintained. This huge force used up more than 80 per cent. of the budget, and in addition unpaid soldiers and regional commanders levied special taxes, seized food supplies without paying for them, and paid nothing for billeting.

To-day the army of Manchoukuo numbers about 125,000 men, and uses up a little more than 30 per cent. of the budget.

In addition—there are more than 50,000 Japanese soldiers in Manchuria, paid and maintained by the Japanese empire.

Originally the Japanese high command in Manchuria figured that the Manchoukuo army need not exceed 35,000 to 40,000 men, but the question now is what to do with the extra 85,000 to 90,000 unwanted Manchoukuo soldiers. If they are disbanded, as some have been, they return to banditry. Kept in uniforms and in barracks, and subjected to training and discipline, they become restless and a danger. They frequently mutiny. When sent on anti-bandit campaigns they refuse to fight unless intrusted, squad for squad, with Japanese soldiers.

THE RHYMING OPTIMIST

By Aline Michaelis

THE MARVEL OF MAN

I thought of man, of his strength and pride. In the wonders he has made: Of his visions, not to be denied, And his wild heart, unafraid.

O, the marvel of man in his upward climb. Since the mist of earth's dim youth. He has toiled with fervor and faith sublime. And "I he draws nearer to truth!"

There are cities climbing to greet the skies, There are conquests of sea and air, And I gazed in man and his victories. That are fit for a god to share.

He has fashioned his life in lofty mould, Has dowered it with beauty and fire, And his toys are fame's traps and gauds and gold; But love is his heart's desire.

Wears King's Medal

Woman Missionary Has Valued Decorations For Service In China

One of the outstanding delegates who attended the biennial meeting in Montreal of the council executive of the Women's Missionary Society of the Presbyterian Church in Canada was Dr. Margaret O'Hara, retired missionary, who worked in China from 1899 to 1927.

At the opening session of the meeting the decorations won by Dr. O'Hara attracted much attention. In 1902 she received from the hand of King Edward the Kaisar-i-Hind medal for devoted service during the famine of 1897-1902 in India. From her Alma Mater, Queen's University, she has received the degree of LL.D., and from the W.M.S., a gold medal bearing three bars, in tribute to her work.

Cat's Revenge On Motorist

Near Klagenfurt, Austria, Peter Sussbauer bled his horn at a grim black cat minding across the road in front of his car. The cat sprang its tail, arched its back, crouched, hissed, sprang from ground to running board, to door, to steering wheel, to Peter Sussbauer. Bled scratched and bitten around the neck, Motorist Sussbauer was hospitalized.

Sir Edward Elgar, noted British composer who died last February, left an estate valued at \$14,000.

Little Helps For This Week

"If ye fulfil the royal law according to the scriptures, Thou shalt love thy neighbor as thyself, ye do well." James 2:8.

Come children let us go. We travel hand in hand; Each in his brother finds his joy In this wild stranger land. The strong be quick to raise The weaker when they fall; Let love and peace and patience Be ready help for all.

It is a sad weakness in us after all that the thought of a man's death hallows him anew to us, as if it were not sacred too, as if it were a light thing to fall in love and reverence to the brother who has to climb the whole tollsome steep with us, and all our tears and tenderness were due to the one who is spared that hard journey.—George Eliot.

Would we not today the laws that should reign in households, and whose daily transgression annoys us and degrades our household life, we must learn every day to adorn it with sacrifices. Good manners are made up of petty sacrifices. Temperance, courage, love, are made up of the same jewels. Listen to every prompting of honor.—R. W. Emerson.

ARE YOU ON A Diet?

"I wish I'd known"

There's always a new experience ahead something you haven't done before and which calls for a decision.

You become engaged—and immediately you are called upon to decide on the purchase of many, many things you never bought before.

You marry—and furniture, draperies, silverware, china, radios, gas stoves, automobiles, gasoline and oils claim your dollars and call for your choice.

A baby comes—and again you face a new experience in purchasing clothes and powders and blankets; in buying a crib, baby carriage, foods, toys.

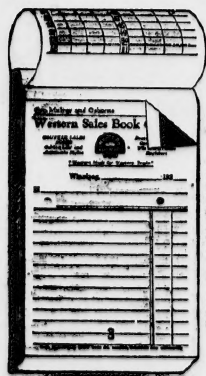

Next—what school? For the years pass incredibly fast. Once more, a new decision.

Every room of your house requires choice. Every meal served in your dining-room results from your having decided on what to serve. Every day confronts you with a multitude of possibilities from which you must select those which make life happier and better, and make the dollars go farther.

How on earth are you going to make those decisions? How can you know what you want and what you don't want? How can you buy to such advantage that you'll seldom, if ever, have occasion to use that futile phrase, "I wish I'd bought something else"?

You get your ideas from reading advertisements do you not?

The non-advertisers should think this matter over too.

The Gleichen
Call

Town & District

Mr. Lucy Pickering, formerly on the staff of the Old Sun School, left Friday evening for Alert Bay, B. C., where she intends to take up a position at the Indian school.

Mrs. M. J. Hovey left Thursday evening for Kenora, Ont., where she intends to spend her holidays.

Mr. and Mrs. James Snell and family and Mrs. Chas. Martin of Carbon spent Monday in town visiting Mr. and Mrs. Frank Bates.

The 22nd Battery returned from a successful camp at Sarcee.

Harvesting will soon be here. Binders, combines, and elevators are being fixed up ready to take care of the crop.

Mr. and Mrs. Jack Markie were visitors in town last week, the guests of Mrs. J. J. Robinson. Jack is well remembered when he worked in the drug stores. He is now teaching school at Midlandvale, Drumheller.

Freddie Brown of Arrowwood and Jack Stabback of Calgary are in Gleichen at present visiting Campbell and Elliott Evans.

W. Sutermeister is a very busy man these days getting his combines ready for action. He is one boy who believes in being prepared.

Mrs. Rhoda Sivell of Medicine Hat spent Tuesday in town. This being her first visit here in 27 years. Mrs. Sivell is returning home from an extended trip to the coast. She is a postess and recently got out a book of poems.

Invitations are now being sent out to all members of the Eastern Star and the Masonic Lodges for their combined picnic to be held next Wednesday east of the Bow River bridge south of town. The committees have everything arranged and hope for a large turnout of members of both orders.

Stan Haskayne and Mr. Myers left for Manville where they will holiday for a short time.

Miss Gray, of the Blackfoot hospital staff is vacationing in Alaska.

Adj. Sutherland, officer in charge of Eventide Home, made a business trip to Edmonton last week.

Lt.-Col. and Mrs. Lewis have left on a motor trip to the coast where they will spend their holidays.

Mr. and Mrs. Wm. Harner, Jr., announce the birth of a boy Sunday evening.

CURRENT COMMENT

"What's the matter here?" asked the policeman, who had been banging on the front door. "Nothing serious," answered the man with a dusty face. "It sounds like a drunk smashing up furniture." "I have been doing a little furniture smashing. You see, we're going to move, and there's some of our stuff that my wife would rather burn up or send it out with the trash than let the neighbors see it standing on the sidewalk."

Begin to save when you are young. There is one sure mark of the millionaire: his revenues always exceed his expenditures. He begins to save as he begins to earn. Capitalists trust the saving young man. It is not capital your seniors require, it is the man who has proved he has the business habits which make capital. Begin at once to save up something. It is the first hundred dollars saved which tells. And here is the prime condition of success, the great secret: concentrate your energy, thought and capital exclusively upon the business in which you are engaged. Having begun on one line, fight it out on that line. Finally do not be impatient for as one man says, "No one can cheat you out of the ultimate success but yourself."

A Gleichen mother contends that a circus is educational for her children. Most parents will agree, provided they can go along.

A psychologist declares that women are happier than men. There is no doubt that they get more enjoyment out of their misery.

We all remember amusing errors of childhood whereby we misinterpreted certain words in memorizing orally taught sentences. A very young Gleichen movie fan recently illustrated this tendency by beginning his Lord's prayer thus: "Our Father Wo art in Heaven, Hollywood be Thy name."

—In fact anything in the line of printing—

from The Call

"The wicket flew when no man pursued," but so did the innocent in a recent case. A boy of 13 in Alberta, shooting at a hawk, saw a distant man fall and lie motionless. Visions of a hangman's noose caused him to flee and hide in a swamp for 30 hours until a searching party found him. His bullet had overthrown a stiff snaretrap.

Young fellows who are ambitious to set the world afire frequently begin by lighting a first cigarette.

We often wonder whether those long-winded radio advertisers realize that listeners have a movable dial.

Mourning periods in Korea range from three days among the lower classes to nine months for a royal personage.
